# BirdSmart® Bird Safe Glass Cutting and Installation Guide

## BirdSmart® Speck 6 Inline 2x4

Threat Factor: 25  
Orientation: Directional  
Pattern Dimensions: 2" x 4"

Images not to scale.

### Installing BirdSmart® Speck 6 Inline 2x4

Since this is a directional pattern, the glass must be installed with the 4" spacing horizontal to the ground to comply with the 2x4 rule and ensure a threat factor of 25.

**Note:** Window D was cut and installed incorrectly with 4" spacing aligned vertically, removing the bird-safety threat factor and disrupting the exterior aesthetic because the patterns don't align.

### Cutting BirdSmart® Speck 6 Inline 2x4

Portrait

Landscape

To maintain a threat factor of 25 and ensure a consistent pattern, all glass cutouts must be cut and installed in the same orientation.

## BirdSmart® Speck 6 Shift 2x2

Threat Factor: 20  
Orientation: Directional  
Pattern Dimensions: 2" x 2"  
with 1" offset

Images not to scale.

### Installing BirdSmart® Speck 6 Shift 2x2

The shift pattern results in a dot spacing of 4" in one direction and 2" in the other. The glass can be installed in either orientation, as both have the same threat factor.

**Note:** Window D was cut and installed in a different orientation than the rest of the windows, disrupting the exterior aesthetic because the patterns don't align.
